

Arrangement Architecture - DEPOSITS

CITP PHASE II – JULY'11

SRINIVASAN A

TAMILSELVI C

Introduction to ARRANGEMENT ARCHITECTURE

- The AA module provides a flexible framework that allows a number of new T24 modules to be created.
- The application provides a business component based architecture for the management of products.
- Through arrangement architecture, components of banking products are defined.
- These components can be used across lines of business according to the requirements whether deposit or lending, internet services

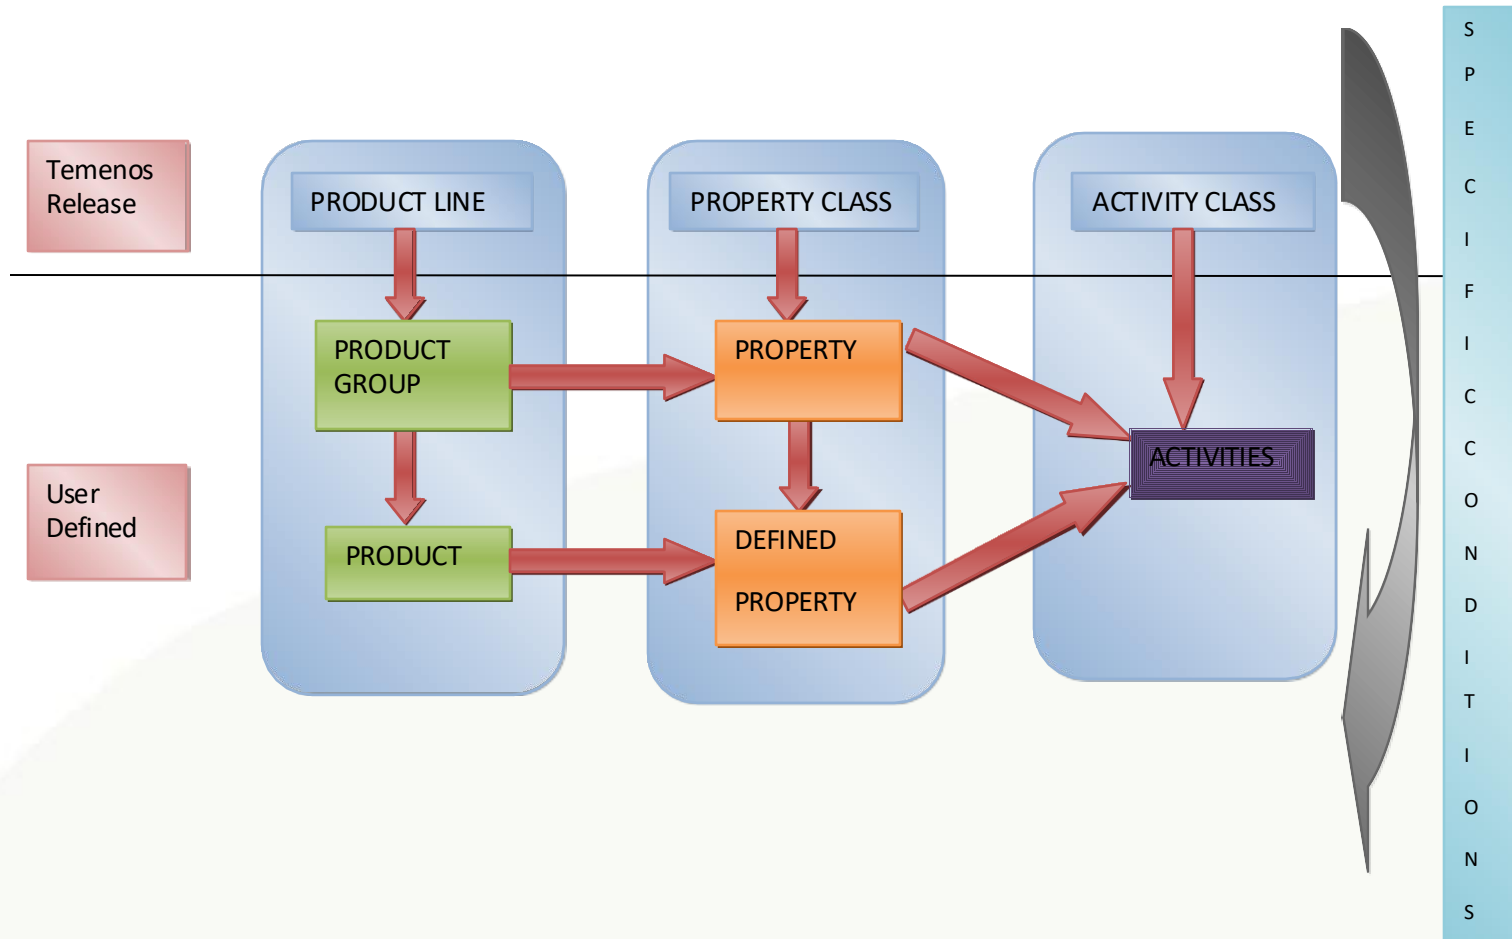

Arrangement

- Understanding between Bank and Client
- Client buys a product of the Bank
- Each Arrangement can have different characteristic if defined at product level
 - Can change if product characteristic is changed

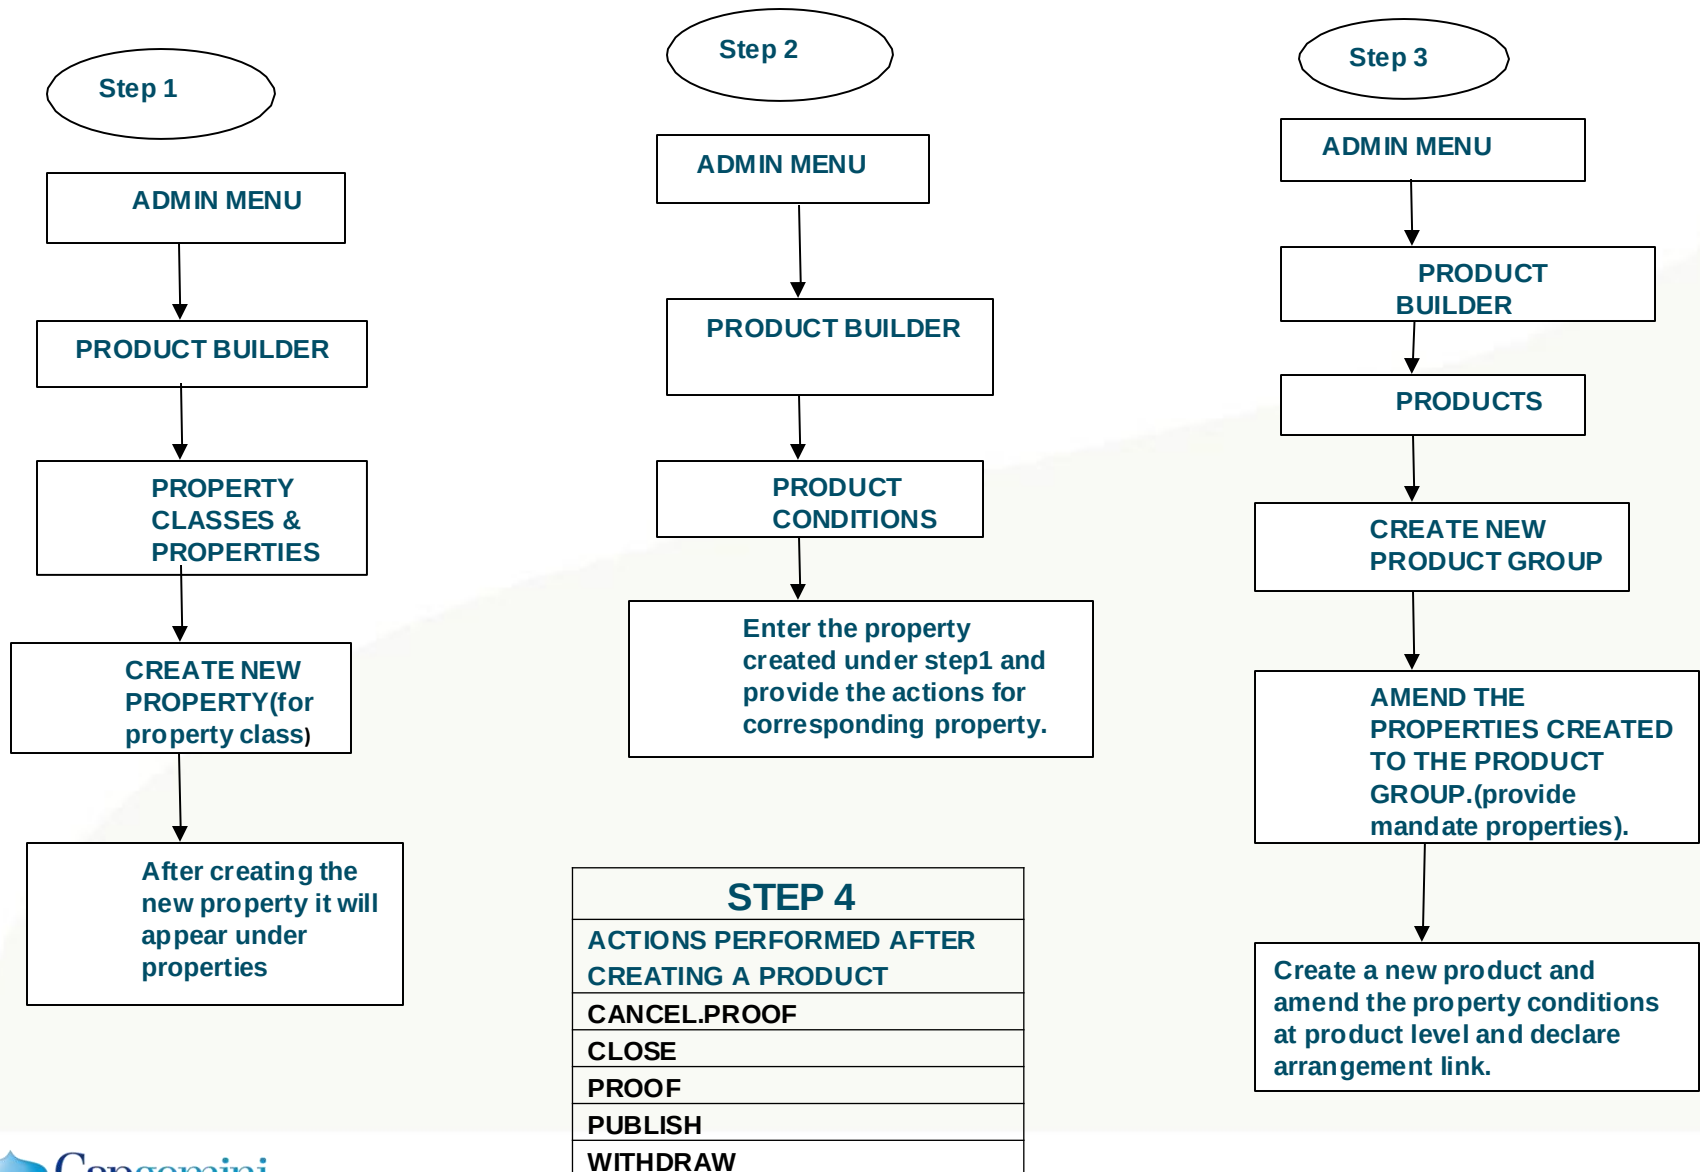

Features of the AA module

- Ability to build families of products.
- Ability to inherit properties from the product family structure.
- Ability to determine the properties that a product is comprised of.
- Control of default values to be applied for product arrangements.
- Full control of scope between product and arrangement conditions.
- Design/Proof/Publish lifecycle for product management.
- The product builder can be used to create and maintain existing application (Mortgage, Account, Loans and Deposits and AZ) product parameters.

PARAMETER FILES

- AA.PRODUCT.LINE – Defined by Temenos
- AA.PRODUCT.GROUP – User creates based on requirement
- AA.PRODUCT – User creates based on requirement
- AA.PROPERTY.CLASS – Defined by Temenos
- AA.PROPERTY – User creates a property and attaches it to property class
- AA.ACTIVITY.CLASS – Defined by Temenos
- AA.ACTIVITY – User creates a activity and attaches it to activity class
- AC.BALANCE.TYPE – Used for COB Processing
- AC.ALLOCATION.RULE – Used for COB Processing

PARAMETER FILES

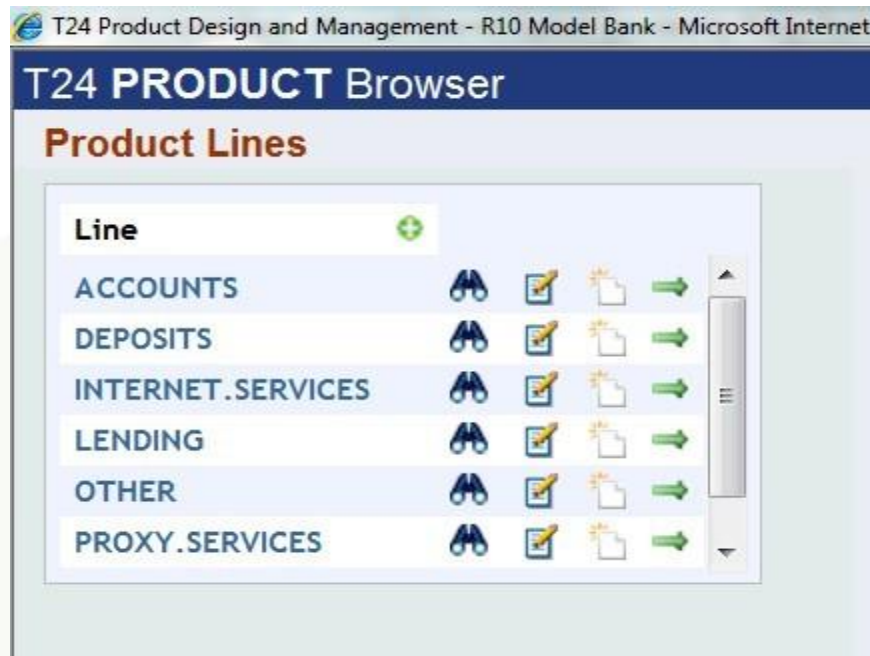

- **AA.PRODUCT.DESIGNER** - This is the master table for designing any product which the financial Institution may wish to introduce. This is the table where users link the desired Properties (from AA.PROPERTY) to the appropriate conditions.
- **AA.ARRANGEMENT.ACTIVITY** - The Arrangement Activity application serves both as a mechanism to allow a user to initiate an Activity and as a record of each Activity that has been processed against the Arrangement.
- **AA.ARRANGEMENT** – The AA.ARRANGEMENT file records generic information of the arrangement contract.

Product Line – AA.PRODUCTLINE

- Released by Temenos. Temenos has released 6 product lines
 - **LENDING**
 - **INTERNET SERVICES**
 - **PROXY SERVICES**
 - **ACCOUNTS**
 - **DEPOSITS**
 - **OTHER**
- Product Group should belong to a Product Line

PRODUCT LINE – AA\PRODUCT.LINE

- Product lines are based on functionality of banking areas. e.g. lending, deposits
- Temenos has defined property classes and each product line is constructed with the use of Property Classes according to the requirement

PRODUCT LINE – Defined by Temenos

The highlighted Property Class are mandatory for Deposits in Product Line

AA.PRODUCT.LINE DEPOSITS (R10 Model Bank)		
GB Description	Term Deposits	
Full Desc	Term Deposits	
Property Class.1	ACCOUNT	Account Static

Product Group – AA-PRODUCT.GROUP

- This is the second level of classification
- Products having similar characteristic grouped together
- Each product group will have unique characteristic
- Each product under the product group can inherit the same characteristic or can have additional characteristic.

PRODUCT GROUP – AA\PRODUCT.GROUP

- New properties are defined at the Product group level, however existing property classes can also be used

PRODUCT – AA PRODUCT

- The last level of classification.
- All instances (in AA terms – Arrangements) of a product will have the same basic attributes
- Products contain properties and property specific conditions (corresponding property class) as defined by user
- Once a product is proof-read and published it is available under product catalogue

Default Negotiable

- The field Default Negotiable in “AA.PRD.DES.XXX” file holds the value as
 - Yes : If the value is set it as “Yes” then the user can indicate whether the field can be negotiated at the Arrangement Level
 - No : If the value is set it as “No”, then the field can be indicated as non negotiable at the Arrangement Level

Product –Property Conditions

Arrangement Link

- Determines whether Conditions specified for each property should perform the following:
 - Tracking
 - Non Tracking
 - Custom Tracking
- Tracking :

Any changes to product conditions will get reflected at the Arrangement level
- Non Tracking :

Any changes to product conditions will not get reflected at the Arrangement level
- Custom Tracking :

Similar to Tracking, but the user can input any fields at the Arrangement level

Remaining fields are tracked at the product property level

Property Class – AAPROPERTY.CLASS

- Released by Temenos
- Property classes are the building blocks and pre-defined by TEMENOS
- An existing property class cannot be amended and further a new property class cannot be created
- Each product line with set of Property Classes are supplied by TEMENOS
- Property classes within Product Lines can be optional or mandatory.
- Where the Product Line has a mandatory Property Class, the Product Group must have a property of that class. So for example every Deposit Product Group must have a CUSTOMER property, to represent the owner.

PROPERTY CLASS - LIST

AA.PROPERTY.CLASS - Default List - Microsoft Internet Explorer provided by Thesys Technologies

Results 1 - 19 of 46

AA.PROPERTY.CLASS - Default List

Id	Description	Full desc
AC.ACCT.GROUP.CONDN	Account Group Parameters	Account Group Parameters

ACTIVITY.MAPPING	Activity Mapping	The Activity Mapping property class defines the links between external transactions and the actio
ACTIVITY.MESSAGING	Activity Messaging	Activity Messaging defines the link between advices such as customer confirmations, chaser mess
ACTIVITY.PRESENTATION	Activity Presentation	Activity Presentation allows screens (versions) to be specified for individual arrangement condi
ACTIVITY.RESTRICTION	Activity Restriction	Activity Restriction are used to apply restriction rules to transactions activities such as withdraw
ALERTS	Alerts Definition	The Alerts property class defines the conditions for sending alerts for an arrangement.
ARRANGEMENT.PREFERENCES	Arrangement Preferences	Arr Preferences
AZ.ACCOUNTING	AZ Transaction Code Mapping	AZ Transaction Code Mapping
AZ.CR.CARD	AZ Credit Card Details	AZ Credit Card Details
AZ.DEPOSIT	AZ Deposit Details	AZ Deposit Details
AZ.LOAN	AZ Loan Details	AZ Loan Details
AZ.SAVINGS	AZ Savings Plan Details	AZ Savings Plan Details

Property – AAPROPERTY

- Characteristic of the Product
- One Property is mandatory for the Product
- Derived from Property Class
- Property Classes define the fundamental building blocks, a more specific classification is necessary to fully describe a product
- Any property if desired can be created corresponding to the class
- Some property classes have multiple properties
- Example interest, charges classes can have multiple properties. (eg Principal interest, Penalty interest, New arrangement fees, Account closing fees)

PROPERTY CONDITIONS – AA.PR.DES.XXXX

- Property conditions are used for defining required values of the properties in the product. (However derived from corresponding property class)
- For example, the conditions for the INTEREST property class are defined in AA.PR.DES.INTEREST and the fields are all interest related
- Same way, each property class record is linked to an application AA.PR.DES.XXXX, where XXXX is the ID of the property class. Values or default records are defined within these applications
- Conditions defined for the properties are defaulted in when an arrangement is entered, however it is possible to effect /give new values at arrangement level.
- Property conditions can be changed with effective dating, if required.

Activity Class – AA.ACTIVITY.CLASS

- Activity Classes are defined by Temenos and cannot be changed by the user
- It defines a behavior of an activity that acts on properties
- For e.g.: Adjustment of Interest accrual will result in an “Action” on the “Interest”
(Property class) – the Activity class is “DEPOSITS-ADJUST-INTEREST”

Activity – AA ACTIVITY

- Activities are “actions performed on a property from a particular Product line”.
- An activity is an operation that can be applied to Arrangements

E.g.: Disburse, Accrue Interest, etc

- Banks can create their own activities based on existing Activity Classes
- Arrangements can only be updated via Activity (both Online & COB)

AA.ACTIVITY - List

DEPOSITS-AMEND.HISTORY-OFFICERS	Amend History Activity for Officers	SYSTEM CREATED		YES

Highlighted are the uses of different menu under Product builder

- Product building is done through AA.PRODUCT.DESIGNER application
- So product design is building up the product with conditions for properties of the property classes supplied for that particular product line
- Advantage is that once a condition has been defined, it can be re-used in other product lines also
- Handling multiple currencies for the product

ARRANGEMENT ID FORMAT

- Unique identification number for the arrangement contract. The format of the ID is as follows:
- Arrangement activity ID - AA`ACT1000801J511S2`
- Arrangement ID - AA`10008GXK9G`
- Alternate arrangement ID used for FT,TT transactions) – `43931` - USD

ARRANGEMENT STATUS

ARR.STATUS

This field indicates the status of the Arrangement during the life cycle of the contract.

The status can be standard statuses like,

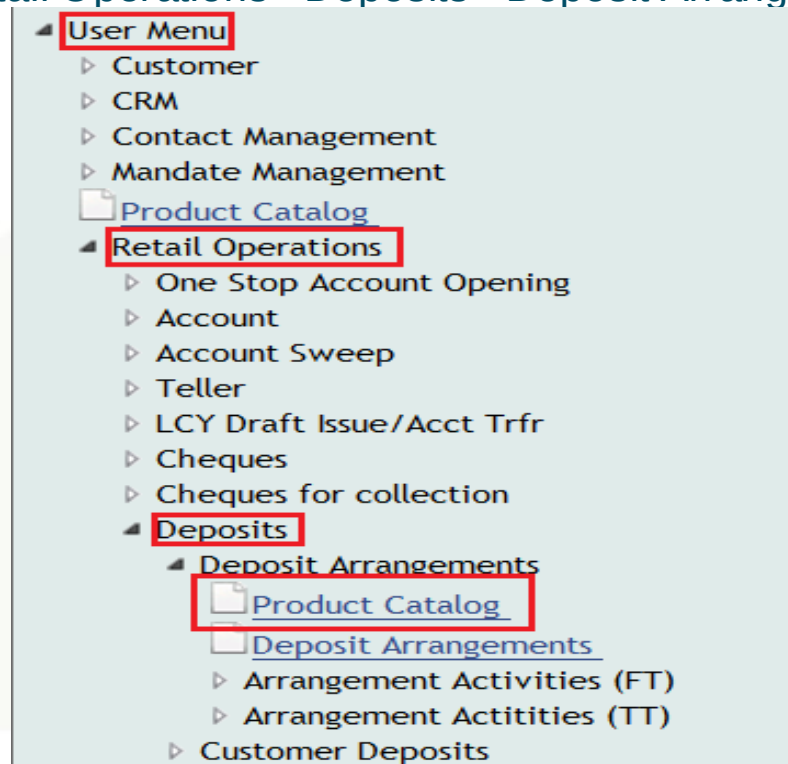

- UNAUTH - The arrangement has been input and not Authorized yet.
- AUTH - The arrangement has been Authorized and LIVE.
- AUTH-FWD (Forward) - At this stage the Arrangement is not active and will be active on a future date.
- CURRENT - The arrangement has begun disbursement. Even if partial disbursement happens, this field would hold the same value.

ARRANGEMENT STATUS

- **MATURED** - Arrangement contract has matured and ALL DUES on this arrangement has been cleared.
- **EXPIRED** - Arrangement contract has gone past its final payment date. But it still has some dues left unsettled. But no-more disbursement can happen after status has reached MATURED or EXPIRED.
- **REVERSED** - The arrangement contract has been reversed.
- **CANCELLED** - Arrangement contract has been Cancelled(Only for Deposits)
- **CLOSE** - Arrangement contract has been Closed
- **PENDING.CLOSURE** - Arrangement contract is ready for closure.

ARRANGEMENT CREATION

- Transaction in T24 are termed as Arrangements
- Arrangements are created using Product Catalog
- AA.PRODUCT.CATALOG application is used to create Arrangements in T24
- User Menu> Retail Operations> Deposits> Deposit Arrangements – Product Catalog
